

Abstract

Quick change mounting brackets provided for mounting a single scuba tank to the back of a BCD (buoyancy compensating device) for scuba diving. One bracket is attached to the BCD and the other bracket is attached to the scuba tank. The bracket attached to the BCD is secured by means of two screws, two washers, and an inset female anchor for the screws. The bracket mounted to the scuba tank is secured with two scuba tank straps. After the two brackets are secured to their designated items, the two brackets are attached by sliding in a vertical fashion from top to bottom the “dove tail” extension located on the scuba tank bracket into the female “dove tail” groove designed into the bracket located on the BCD. The two brackets are further secured together by means of a Detent pin at the top of the two brackets, which further secures the two brackets together. The two brackets are secured to their respective items by means of screws, washers, threaded inset, and scuba tank bands.
